

Benefits of Magnetized Water

Magnetized water is being used in many countries for its health benefits, including:

- * to wash and disinfect external lesions of the skin.
- * as an anti-bacterial, anti-viral, anti-parasitic treatment.
- * to promote a more alkaline body pH, necessary for good health.

The earth's magnetic field naturally charges water in lakes, wells, and running streams.

Water that passes through your city water treatment plant is transported through underground piping which causes the water to lose its magnetic energy; therefore treating water by passing it through a magnetic field will restore the natural energy and balance. It also rids the water of memory. There are systems available that magnetize the water as it comes into the faucet. These are known as point of use or point of discharge systems. (Find out more about the Nikken Pi-Mag Living Water System!)

Benefits:

- * Magnetized water tastes sweeter and has more clarity
- * Magnetic water promotes a more alkaline pH in the body (the alkaline water is not conducive for cancer cells)
- * Magnetic water promotes healing of wounds and burns
- * Magnetic water has a therapeutic effect on digestive, nervous and urinary systems
- * Magnetic water may also be beneficial for fevers, sore throat, menstrual and menopause discomfort
- * Magnetic water revitalizes the body (Pi Water is high in Oxygen)
- * Magnetic water provides positive effect on the nervous system (pi water is high in electrolytes)
- * Magnetized water has been reported to help regulate the heart function and promote the clearing of clogged arteries
- * Magnetic water has been beneficial for kidney ailments, gout, obesity and premature aging
- * Magnetic water may help relieve pain
- * Magnetic water infuses energy into the body, controls bacteria, and stimulates brain function

Also:

- * Magnetic water controls scale buildup in pipes and plumbing (and maybe your own plumbing)
- * Magnetic water has a positive effect on plant growth.
- * Magnetic water is more solvent and has a lower surface tension, so nutrients in the water are absorbed more readily.
- * Use on agricultural crops results in higher production and improved quality of the plants with a reduction in the use of fertilizer.

I've been told that magnets have been used on water lines for industry such as refineries and industrial cooling and the agriculture industry such as hog farms, chicken farms and irrigation for many years. They say it removes and prevents mineral deposits from water lines and prolongs the life of machinery, cooling towers, etc. that would be made less effective and eventually need to be replaced due to the mineral build up in the lines.

I'm excited about our newly designed and improved, very powerful water line "MAGNA-CHARGER" Nikken just introduced, Item code # 1312. I learned on a Diamond Conference call that this newly designed water line magnet produces "focused energy" into the water line. Every home can benefit

with water line magnets to remove water line buildup and keep the lines clear and clean. I have them on mine and even my motor home incoming line.

One word of caution: When installed, don't be alarmed if cloudy water comes out of the faucets for a few days. It's just the mineral build up being dissolved. It's just minerals and won't hurt you. This MAGNA-CHARGER can be a very WISE investment to help prevent plumbing problems from mineral deposit build up in the lines, faucets and water heater and is sure cheaper than replacing a water heater (and/or repairing the water leak damage in the house). And it just helps process the water even ahead of your PiMag System and it should be installed as near the incoming line as possible, even outside the house if necessary.

Jan talked to a physicist that said it is "totally impossible to magnetize water." Apparently the guy has never heard of the MRI in which water molecules in bodies are lined up. Gee, I guess they need to pull the plug on all of the MRI machines...they don't work. Or perhaps the physicist needs to preen his feathers a bit and accept the label he wants to put on us.

In answer to your question of actual proof for magnetized water, I find it hard to believe a physicist doesn't know water can hold a charge! I wouldn't want to stand in a pool of water with a live wire in it! Get Dr. Richard Gerber's book, "Vibrational Medicine - New Choices for Healing Ourselves." This book is very scientifically detailed, and starting on p. 77 talks about the "energetic properties of water" and the groundbreaking experiments done in the 1960's by Dr. Bernard Grad at the McGill University in Montreal. Grad carried out chemical tests on water to see if energizing it had caused any measurable physical changes. He found that magnet-treated water showed a decrease in surface tension (enhances body's ability to store the water). He showed that "magnet treated water was able to induce measurable changes in plant physiology and growth, although no physical substances were added to nor detected in the water." (page 79). This is a fascinating book! Hope this helps!

Research has shown the following can be observed after water has been magnetized:

1. Magnetic fields break up clusters, which lowers the surface tension of water molecules allowing for easier absorption. This is a key feature. In recent years people have been focusing on ways to produce water with lowered surface tension. Essentially, the water is not as 'sticky'. Calcium carbonate is electrically neutralized and remains in suspension. The magnetized water dissolves deposits while flowing through pipes, this pertains to industrial pipes as well as to our own 'internal piping', gallbladders, urinary tracts and calcium and cholesterol clogged areas.
2. Altered binding forces between water molecules and various proteins, salts and minerals appear to endow the water with the ability to dissolve buildups of various types of salts and minerals. This increased mineral solubility also improves the distribution of nutrients throughout the system.
3. An increased ability to establish a balanced pH. All enzyme activity and fermentation processes are only possible within a certain pH environment, which magnetic fields help to create. They specifically help with resolving acidic conditions oftentimes seen with chronic diseases.

4. An increased enzyme reaction time. Every function of the body is dependent upon enzyme activity. Enzyme activity occurs more efficiently in solutions of lower viscosity.
5. An increase in hydrogen ion activity. This softens water without using salt.
6. In accordance with the properties described of magnetized water many experiments and therapeutic results have been reported. For example:
 - o Reduced cholesterol due to decreased build up and hardening of arteries (in as short as three weeks).
 - o Improved digestive functions, decreased gastric acid
 - o Improved waste and toxin elimination
 - o Strengthened immune system
 - o Decreased constipation and cleaner intestinal tract
 - o Kidney and bladder stone reduction & decreased bladder rigidity. Ingestion of 50 ml magnetized water every 10 minutes for 8 to 10 times has been effective for the treatment of urinary retention.
 - o Reduced severity of menstrual problems
 - o Reduced dental calculus and gingival inflammation. (A peer reviewed double blind, placebo controlled study in 1998 at the Med. Univ. of S. Carolina showed 64% less calculus, and a 27% lower rate for gingival inflammation. Johnson, Journal of Clinical Periodontology, 25 (1998).
 - o Effective in the treatment of intestinal parasitic disease in children
 - o Increased productivity of livestock. Experiments with 85 cows revealed extra liter of milk produced daily, easier conception, & increased muscle tone for those cows given magnetized water as part of their diet. Sheep produced more wool and chickens produced more eggs over a longer duration.

❖ As a side note, the healing waters of Lourdes and Sedona are said to possess a high magnetic field.

It is not technically correct to say that the water is "magnetized." In fact, in a sense water is naturally "magnetic." As it is passed through a magnetic field, its magnetic properties are temporarily altered, with a result that is beneficial to health.

Vincent Ardizzone (Nikken's corporate magnet expert and the guy who holds the patents on a lot of the advanced magnetic technology) explained it like this: One of the many unique properties of water is that each water molecule is like a tiny magnet in the sense that it has polarity--the oxygen atom pulls electrons away from the hydrogen atoms, making the oxygen end of the molecule more negative and the hydrogen end more positive (this phenomenon is called "dipole moment"). Because of this polarity of each water molecule, water molecules tend to link together in large, tight clusters (the positive end of one molecule stuck to negative end of another, and so on). This clustering behavior makes the water difficult to absorb on the cellular level, where it's needed. Passing water through a magnetic field breaks down the large clusters into smaller ones, thus making them more readily absorbable.

For example, the following web sites contain more technical information about the polarity of molecules, dipole moments, etc.:

Have you seen the magnetic water strength test? Take two glasses of water, (about 2 oz.) set one on a magnetic for about 10 minutes. After ten minutes ask the prospect to wash their hands in the non magnetized water, then do a strength test.

Next.....the prospect then washes their hands in the magnetic water. Repeat the strength test. The second test will show more strength. Indicate the shower head ...ask, wouldn't you rather be using the water that is better for your skin every day?

Be quiet - first one to speak loses.

Should allow you to sell one shower head every week, minimum.

Ann and Dan Sullivan
