We can't believe what a difference our Kenkoaire sleep system makes! It is absolutely incredible!

I stopped in at a retail outlet for a very well advertised sleep system that has been available for some time that also uses adjustable air technology and it was an eye opener! The quality doesn't compare at all to what Nikken has! They have air chambers that only run one way throughout the mattresses, whereas Nikken uses a stronger, virgin rubber material with baffles that run both ways for much more control and support. Their mattresses can lose air during the night, so the pump comes on and wakes you up. Nikken's does not!

Ours has the benefits of our patented rubberthane, and magnetics...theirs does not! The top of our mattress is woven bamboo that is very soft and luxurious and is hypoallergenic and protects against viruses and dust mites.

Ours has a feature to fill the bed up to firm at the touch of a button when you make the bed and a memory button to bring it back to your favorite number (from 1 to 50 in single digit increments). There's has only 5 digit increments, which are simply arbitrary numbers. To get one of their beds with the memory feature, you have to go into their higher price range. They have beds that cost \$4,700!!

Nothing compares to our new Kenkoaire Sleep system. You have to sleep on it to really believe and appreciate it.

There are important benefits in the natural bamboo cover and rubberthane that you may not be aware of that are included as the top cover of the Nikken sleep system.. Bamboo fiber will reduce bacteria by 1,000,000 times over a 24 hour period. By the time for to go to bed the next night the bacteria you left there has disappeared. Bamboo fiber is thinner than hair. It has a round and smooth surface. Thus it has no stimulation against human skin. Truly remarkable and a great product.

Rubberthane kills Dust Mites. Because Rubberthane and bamboo fiber are very efficient at wicking away the moisture we generate when we sleep, our mattresses remain cool and dry. Dust mites need a relative humidity of 70% or higher to survive. Thus no dust mites! This is a key and important benefit. Dust mites are the second leading cause of allergies, second only to pollen.

WE have been sleeping on the Kenkoaire mattress for a week now and REALLY like it! It is very comfortable and love that each person can adjust own side. I have no more pressure points at all for the first time. It looks nice once you put it together. It holds the air very well. One tip, the mattress enclosure (holds it all together), is zipped to the bamboo top in the packaging. I thought it was missing from box. It was a little challenging putting it together, but worth it. We felt it was definitely worth the money. Try it, you'll like it!!!
